LAPORAN TUGAS KECIL 2 IF2211

Mencari Pasangan Titik Terdekat 3D dengan Algoritma *Divide and Conquer*

Ditujukan untuk memenuhi salah satu tugas kecil mata kuliah IF2211 Strategi Algoritma pada Semester II Tahun Akademik 2022/2023

Disusun oleh:

BAB I

ALGORITMA

1.1. Algoritma Brute Force

Algoritma brute force adalah suatu pendekatan algoritma yang lempang (straightforward) untuk memecahkan suatu persoalan. Algoritma ini memecahkan suatu persoalan dengan cara yang sangat sederhana, langsung (direct), dan jelas (obvious). Pendekatan brute force membutuhkan volume komputasi dan waktu penyelesaian yang relative cukup besar. Meskipun begitu, algoritma brute force dapat menyelesaikan hamper semua persoalan dan sangat cocok untuk persoalan-persoalan kecil.

1.2. Algoritma Divide and Conquer

Algoritma divide and conquer adalah suatu pendekatan algoritma untuk memecahkan suatu persoalan dengan cara yang membagi persoalan tersebut (divide) sehingga menjadi suatu bagian yang lebih kecil untuk dapat diselesaikan (conquer). Pendekatan divide and conquer ini memiliki 3 fase dalam implementasinya, yaitu fase divide atau membagi-bagi persoalan menjadi lebih kecil, fase conquer atau menyelesaikan persoalan yang sudah dibagi, dan terakhir fase combine atau menggabungkan solusi sehingga membentuk solusi persoalan semula. Algoritma ini lebih efisien dari algoritma brute force.

1.3. Quicksort

Quicksort merupakan salah satu algoritma pengurutan yang menggunakan pendekatan divide and conquer. Algoritma ini termasuk kedalam category hard split/easy join yang berarti pembagian persoalan relatif lebih susah dan penggabungan reatif lebih mudah. Quicksort ini diimplementasikan dengan cara membagi dua buah larik yang dipisahkan oleh sebuah pivot atau acuan dimana larik pertama terdiri dari bagian yang lebih kecil dari acuan, dan larik kedua terdiri dari bagian yang lebih besar dari acuan. Setelah dibagi-bagi hingga bagian yang lebih kecil, setiap potongan larik kemudian akan diurutkan dan digabungkan kembali.

BAB III

EKSPERIMEN

3.1. Hasil Input dan Output Program Saat n = 16

```
Selamat datang!

Keterangan:

1) Range Koordinat: (-500) - 500

2) Maximum titik: 1000

Masukan jumlah titik: 16

BRUTE FORCE: 92.2497

Jumlah perhitungan Euclidean: 260

Titik 1: (-361, -13, 211)

Titik 2: (-347, 20, 126)

Execution time: 2.287 ms

DIVIDE & CONQUER: 92.2497

Jumlah perhitungan Euclidean: 151

Titik 1: (-361, -13, 211)

Titik 2: (-347, 20, 126)

Execution time: 1.002 ms
```

3.2. Hasil Input dan Output Program Saat n = 64

```
Keterangan:

1) Range Koordinat: (-500) - 500

2) Maximum titik: 1000

Masukan jumlah titik: 64

BRUTE FORCE: 21.0713

Jumlah perhitungan Euclidean: 4104

Titik 1: (156, -496, -34)

Titik 2: (167, -496, -52)

Execution time: 1.985 ms

DIVIDE & CONQUER: 21.0713

Jumlah perhitungan Euclidean: 2223

Titik 1: (156, -496, -34)

Titik 2: (167, -496, -52)

Execution time: 2.427 ms
```

3.3. Hasil Input dan Output Program Saat n = 128

```
Keterangan:

1) Range Koordinat: (-500) - 500

2) Maximum titik: 1000

Masukan jumlah titik: 128

BRUTE FORCE: 31.8277

Jumlah perhitungan Euclidean: 16398

Titik 1: (438, -288, -272)

Titik 2: (452, -271, -295)

Execution time: 8.1 ms

DIVIDE & CONQUER: 31.8277

Jumlah perhitungan Euclidean: 8593

Titik 1: (438, -288, -272)

Titik 2: (452, -271, -295)

Execution time: 3.008 ms
```

3.4. Hasil Input dan Output Program Saat n = 1000

```
Keterangan:
1) Range Koordinat: (-500) - 500
2) Maximum titik: 1000

Masukan jumlah titik: 1000

BRUTE FORCE: 7.14143
Jumlah perhitungan Euclidean: 1000011
Titik 1: (390, 170, 1)
Titik 2: (391, 169, 8)
Execution time: 324.895 ms

DIVIDE & CONQUER: 7.14143
Jumlah perhitungan Euclidean: 502519
Titik 1: (390, 170, 1)
Titik 2: (391, 169, 8)
Execution time: 123.097 ms
```
